Building 9, 16 and 31 are regulated. Get All Required Samples and Surface Areas

#1 MED / AI-5645:

Continue to make batches. Turned the cooling water to the barrel on the extruder – it was turned off – leave it on.

Midnight shift: Running.

Day shift: Continue. May need to write work notification for motor guard on dryer Cleveland vibrator. UPDATE: Work order now written as it appears to be cutting into belt. Maintenance notified, Charlie Fern will be on sight shortly.

Afternoon shift:

#1 RC / AI-5645:

Start the feed on midnight shift after the calciner reaches temperature (kicked out on second shift). Still high NOx product, so be aware of and routinely monitor suction and Trimer status.

Midnight shift: Re-started feeding.

Day shift: Continue

Afternoon shift:

Exhaust to Trimer

#2 MED line/ Cu-0860:

We are to begin mixing batches on midnight shift after we replace the auger.

When we re-start the line we will still need to continue to check every batch before dropping per J. Bodmann. DC #2 work (blow downs) completed.

Midnight shift: Wiper blade removed and auger re-installed. Pulva emptied of dried out material. Re-started the extruder and the four batches have been made.

Day Shift: Finished last material in pulva from last midnight batch, iced out and on hold. Dry ice ordered but not coming until Monday morning.

Afternoon Shift:

#2 RC/ Cu-0860:

Continue to feed and see Bodmann's e-mailed sample instructions.

Hold onto and do not feed bags roped off until advised.

Midnight Shift: No activity.

Day Shift: Finishing feed from midnight batches. Sample as before.

Afternoon shift: No change.

Exhaust to F1

#3 MED / D-0702 done, D-1794 next:

Stop mixing. The last wet mix batch is being run late on second shift.

Midnight Shift: Last batch (wet mix) finished. Pulva scraped out. Powder room hoppers have been emptied and washed. Need clean out instructions.

Day shift: Started clean-up...continue into afternoon (see clean-up sheet)

Afternoon Shift:

#3 RC / D-0702 done, D-1794 next:

All done. After verification with engineer, we should not run directly from the dryer to calciner with the exception of when we are changing bags.

Midnight shift: All material has been fed. Waiting for clean up instructions.

Day shift: Bringing down to reverse, then quick cleaning and set-up for D-1794 (see cleanup sheet)

Afternoon Shift:

Exhaust to CTO-is in Automatic

#5 RC / Cu-0539 next:

Started to feed on second shift. Discharge pipes are clogged and being worked on late in the shift.

Midnight Shift: Discharge pipes cleaned. The vac-u-max filter receiver was emptied after a couple of hours of battling. Drums were set up and the feed was re-started again.

Day shift: Vac-U-Max on discharge end has been an issue, the material would not flow to the drumming station, possibly due to a clean-out cap that came off the receiver. Cap was replaced (probably duct taped on), need to find thumb screw clamp to hold it on. Bob Gavalek looking for one.

Afternoon shift:

Exhaust to Trimer through DC

New Pfaudler / D-1145 SNAP next:

Down until we get the chrome pump replaced. Informed by Seve N. we will not be getting a pump until early next week at best. There is only enough AL 5655 left for two more batches when we restart. Watch the level on the chromic acid tank. We should not have to shut down the pfaudler to make a tank. It can be made on the same shift that we run the pfaudler. Should make 2 Batches per Shift.

Midnight shift: On hold.

Day shift: On hold for chrome pump

Afternoon Shift:

National Dryer / Cr-1145 next:

Continue feeding as material is available. **Target = 700 lbs. per hour.**

Midnight Shift: No activity.

Day shift:

Afternoon Shift: No clean up needed on the dryer.

#4 RC / Cr 5655:

Continue to run and watch that the bags being used do not cone up at the end.

Midnight Shift: Continued on.

Day shift: Down to around 5 bags to feed

Afternoon Shift:

Exhaust to 4A DC

#6 RC / D 5202

Continue to feed and make sure we get people scheduled to repack the buggies. Watch dryer and calciner feed rate.

Midnight shift: Continued on. Repacking Microsorb.

Day Shift: Continue

Afternoon shift:

Exhaust to Sly Scrubber

Old Pfaudler / Clean for D-1795 (CEHW was cancelled):

Continue with the clean up plans.

Midnight Shift:

Day Shift: No change. D-1795 not scheduled for several weeks.

Afternoon Shift: No change.

Tower 3 / Cu-1986:

Continue On.

Midnight Shift:

Day shift: Continue. Should come down middle afternoon shift, then reload and hold for Lucas to work on hydrogen regulator in morning.

Afternoon shift:

Tower 6 / Cu-1986:

Continue on
Midnight Shift:
Day shift: Continue
Afternoon shift:

North Screener / Cu 0860:

Continue On. Currently using an adjustable clamp with a quick disconnect instead of the bungee cord to hold the liner around the discharge chute. So far is working very well.

Midnight shift: Continued
Day shift: Continue
Afternoon Shift:

South Screener / E-474:

Continue On.
Midnight shift: Continued
Day shift: Continue
Afternoon Shift:

#2662 (west) Pill Machine / Zr-0403 1/8:

Continue running. Allen head cone disc was looked at by maintenance and is now operable...enough. A work notification was written to check the DC – 934337722.

Midnight shift: It was running until 3:30 am. Lost belts on the drive system.
Work notification written - 934339404.

Day Shift: Belts repaired, power restored to motor, but work order written for dust collector (low-to-no suction)

Afternoon shift:

#2664 (east) Pill Machine / Zr-0403 1/8:

Continue running. DC back together, pill machine in place. West machine was tested and looked / sounded good. Bag #6 was handpicked and was completed.

Midnight shift: Running no issues reported.

Day Shift: Continue

Afternoon shift:

TK #2 / V 2046 blends:

Continue with blends.

Midnight shift: Running no issues reported.

Day Shift: Continue, 7 bags on the floor

Afternoon shift:

PK Blender / Pill Mix:

On hold until we get more sterotex.

Midnight Shift: No activity.

Day shift: No change.

Afternoon shift: No change.

Abbe Blender:

HOLD. Waiting on next run.

Midnight shift: Hold.

Day shift:

Afternoon Shift:

Building 27 Belt Filter / Cu-5020 Trials next week:

On hold.

Midnight shift: No activity.

Day shift: All tanks prepared...night shift operator should follow emailed instructions for start-up Monday morning (instructions on clip board in HC-11).

Afternoon Shift:

Miscellaneous:

1. Work notification has been written to repair the handles on the doors of all of the mixers. Most of the doors have broken eyelets. We cannot hook the chains and then can't hold the doors up while inspecting the mixes.

(UPDATE: #2 mixer door handles repaired. Will schedule #1 and #3 when they become available).

2. Work notification has been written to fix the horn on the alumina gel forklift and the smoking on the 474 forklift at the towers.

Sampling requirements when we restart on MED #2:

Mixer: MUST be checked before dropping - then get a sample of the wet mix and seal it up so it stays wet – all batches please.

Dryer: Every batch off the dryer must be sampled.

Calciner: Run empty before feeding this material, then using the same temp setpoints as before start calcining it. Get a SA on the material off the calciner about 20 minutes after it first exits the calciner. Adjust the temps to get SA in spec or call Bodmann for advice. SAMPLE off the calciner BEFORE spiral once per hour. Sample off the BAG if possible as well (or at least every bag change).
